M 2 :- Practical-2

Roll No.:T017	Name: Radhika mali
Class:TYIT	Batch:1
Date of Assignment: 2-9-2026	Date/Time of Submission: 2-9-2026

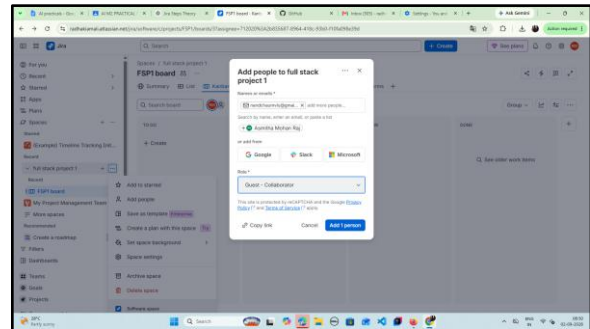

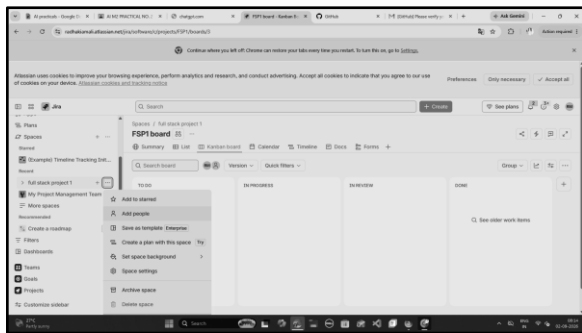

2A) Add Team Members

Theory:

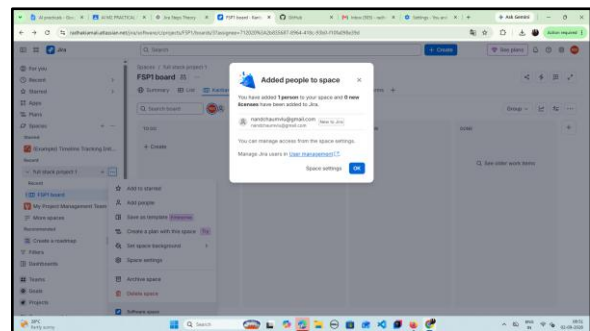

Jira is a collaborative project management tool where multiple people can work together. Team members can be added to a project or space so that they can participate in project activities. While adding a member, we enter their email address and assign an appropriate role. The role determines what the member is allowed to access or do in the project.

Steps:

1. Open the **Full Stack Project** space.
2. Click the **three-dot (...)** menu.

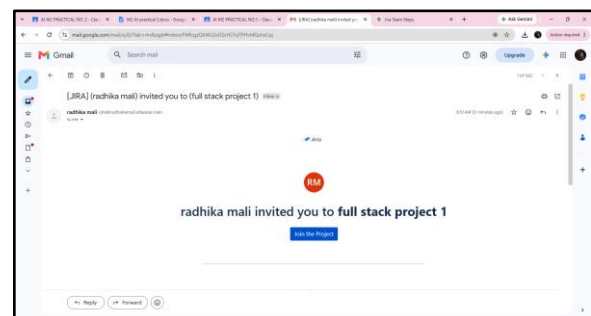

7. Click ok
8. The person will be added to the project.

9. The person you invite will receive it in mail .

3. Select **Add people**.
4. Enter the person's **email address**.
5. Select the required **Role**.
 - **Administrator:** A person who has higher-level access and can manage the project or space.
 - **Guest – Collaborator:** A person who can participate and collaborate in the project with limited access.
6. Click **Add 1 person**.

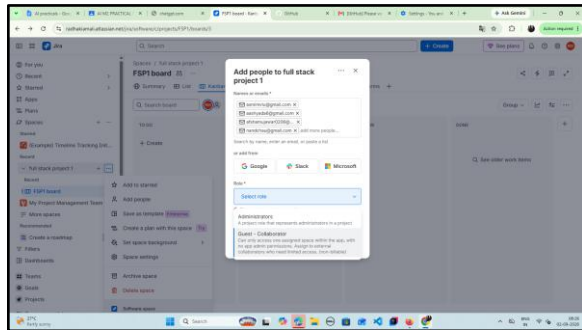

2B) Assign Roles

Theory:

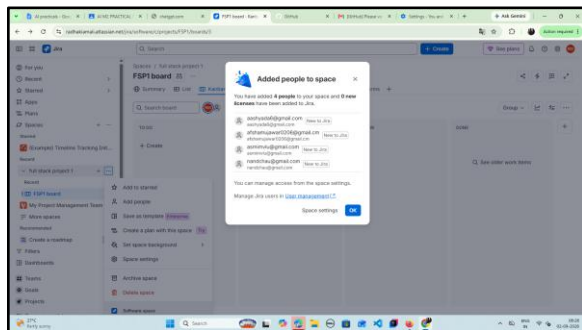

Assigning roles means giving suitable responsibilities and permissions to project members. Different roles provide different levels of access to the project. The role should be selected according to the responsibility of the team member. In this practical, the same process as adding people is followed for a group of people.

Steps:

1. Open the **Full Stack Project** space.
2. Click ... → **Add people**.

3. Add a **group of people**.
4. Select the required **Role**.
5. Click **Add**.

6. The selected people will be added with the assigned role.
7. The person you invite will receive it in mail.
